case1. Personal Portfolio Website

- **Explanation**
- This code creates a personal portfolio website using HTML and CSS.
- The navigation bar provides links to different sections of the website.
- It displays personal details, education, technical skills, hobbies, projects, and achievements.
- CSS is used to style the background, colors, sections, buttons, and navigation links.
- The website also provides a resume download link, contact details, and a responsive layout for smaller screens.

css

```
<!DOCTYPE html>
<html>
<head>
    <title>My Portfolio</title>
    <style>
        body {
            font-family: Arial;
            margin: 0;
            background-color: lightblue;
            text-align: center;
        }

        nav {
            background-color: navy;
            padding: 15px;
        }

        nav a {
            color: white;
            text-decoration: none;
            margin: 10px;
        }

        section {
            padding: 25px;
            background-color: white;
            margin: 15px;
            border-radius: 10px;
        }

        h1, h2 {
            color: navy;
        }

        a:hover {
            color: orange;
        }

        button {
            padding: 10px;
            background-color: navy;
            color: white;
            border: none;
            cursor: pointer;
```

code

```
<html>
</head>
<body>

    </section>

    <section id="achievements">
        <h2>Achievements</h2>
        <p>Participated in technical workshops and activities.</p>
    </section>
```

Screen shot of the output

Conclusion

This program creates a simple and attractive personal portfolio website to showcase personal information, skills education, and projects.

Case2. Online Food Ordering Website

- **Explanation**
- This code creates an online food ordering website named TastyBite using HTML, CSS, and JavaScript.
- The website displays food items, prices, categories, special offers, customer reviews, and contact details.
- CSS is used to design the layout, colors, food cards, buttons, and mobile-friendly navigation.
- JavaScript allows users to filter food items by category and add items to the cart.
- The website also includes an order button and a special discount coupon code for customers.

```

Screen shot of the output

Conclusion

This program creates an attractive and responsive online food ordering website that helps users explore food items, view prices, and add items to the cart.

Case3.Gaming and Esports Community Website

- **Explanation**
- This code creates a gaming and esports community website named GameZone using HTML and CSS.
- It displays popular games, tournament schedules, esports teams, and featured players.
- HTML tables are used to present tournament details and player rankings.
- CSS provides a dark theme, colorful headings, hover effects, card layouts, and responsive design.
- The website also includes a gaming news section and navigation links to different sections.
